Support Services

Energy Management Conservation

The Board embraces energy conservation and believes it to be our responsibility to ensure that every reasonable effort is made to conserve energy and natural resources while exercising sound financial management.

We recognize the importance of adopting an energy management and conservation policy in order to govern this program. We also affirm the implementation of this policy will be the joint responsibility of the board, administration, faculty, staff, students, support personnel, and Energy Education. Success is based on cooperation at all levels.

The designated Administrator will be accountable for energy management with energy audits being conducted and feedback provided by the Energy Education Specialist teams.

- The Board expects all personnel at each facility to make a positive contribution to maximize energy conservation and produce real energy savings.

Further, to promote a safe, healthy learning environment and to complement the energy management program, each facility shall review and adhere to the preventative maintenance administered by the Director of Operations, including HVAC, building envelope, and moisture management.

- The Board is responsible for overseeing the operations and fiscal accountability of each institution under its governance.

- The Board embraces energy conservation and desires for the Adrian Public Schools to become a nationwide institutional leader in energy management and conservation as part of our social responsibility to respect our natural resources.

- The Board directs the Superintendent or designee to develop and implement short and long range strategies to maximize energy conservation.
